PART 1

Administrator Guide

How to build a quiz game, start a session or team round, host it live, and review the results.

Two Kinds of Quiz Game

Quiz Games are managed from the **Quiz Games** page, reached from the main dashboard. A game is a reusable template of questions — starting a session or a team round always makes an independent snapshot of it, so editing a game later never changes a round that has already been played.

Every game is one of two types. **Score-based** games are self-paced: each player (or team) works through the questions in their own time and submits when ready, exactly like a form. **Timed** games are always played live: everyone answers the same four-option question at the same time, against a countdown, on a screen the host controls.

The Quiz Games list, with a Score-based and a Timed game already created.

GOOD TO KNOW

- The **ACTIVE** toggle in the top-right of the editor hides a game from being started without deleting it.
- The type-badge on each list row (blue "Score-based" or purple "Timed") is the fastest way to tell the two apart at a glance.

Building a Timed Game

Timed games use exactly four answer options per question, one marked correct, plus a time limit in seconds. Speed matters: the score awarded for a correct answer decreases the longer a player takes to answer, so a fast-and-correct answer scores higher than a slow-and-correct one.

The question builder shows a running total of the maximum score achievable, so it is easy to see the effect of adding or removing questions before starting a real session.

4-CHOICE

Time Limit (sec): 20

Question Text

What is the correct approved location for a cold start versus a warm (hot) start on a chainsaw?

Options (4 fixed choices — mark the correct one)

1

☒

Cold start on the ground, warm start between the legs

2

☐

Cold start between the legs, warm start on the ground

3

☐

Both cold and warm start on the ground

4

☐

Both cold and warm start between the legs

+ Add Question

Question Text

Can a chainsaw be used above shoulder height?

Options (4 fixed choices — mark the correct one)

1

☐

Yes, always

2

☒

Never

3

☐

Only with a spotter present

4

☐

Only during a hot start

4-CHOICE

Time Limit (sec): 20

Question Text

What commonly causes chainsaw 'kickback'?

Options (4 fixed choices — mark the correct one)

1

☒

Contact with the upper quadrant of the bar/chain tip

2

☐

Correct chain tension

3

☐

A firm two-handed grip

4

☐

Cutting below waist height

4-CHOICE

Time Limit (sec): 15

Question Text

Which chainsaw safety feature stops the chain from turning when activated?

Options (4 fixed choices — mark the correct one)

1

☒

Chain Brake

2

☐

Catcher Peg

3

☐

Throttle Lockout

4

☐

Spark Arrestor

4-CHOICE

Time Limit (sec): 15

Question Text

What is the mandatory item that must be carried in the first aid kit for chainsaw operators?

1

☒

One large compression bandage

2

☐

A tourniquet

3

☐

Burn gel

4

☐

A splint

≡

4-CHOICE

Time Limit (sec): 20

□

▲

Question Text

When recommissioning a chainsaw after use (cleaning, sharpening, refuelling), what is the correct order?

Options (4 fixed choices — mark the correct one)

1

☒

Oil first, then fuel

2

☐

Fuel first, then oil

3

☐

Fuel and oil at the same time

4

☐

Sharpen the chain before adding any fluids

Editing a Timed game — four coloured options per question and a time limit.

Building a Score-Based Game

Score-based games support four question types: single-choice (radio), multiple-choice (checkboxes), Yes/No, and free-text paragraphs for manually reviewed answers. Each question carries its own point value, which the app totals automatically.

Because these games are self-paced, there is no time limit — a player can start the quiz, get interrupted, and come back to finish it using the same access code.

☐ Wear a harness without any training

☐ Work faster to reduce time exposed to the risk

Preview of a quiz as a player would see it.

Starting a Single Session

The **Start Single** button generates one personal access code per selected member — either every active member, or a specific hand-picked selection. Members with a registered email address can be sent their code automatically; the checkbox at the bottom of this dialog controls whether that happens.

Turning the checkbox off still starts the session and generates every code — it simply skips sending the emails, which is useful when codes will be read out or displayed on a screen instead.

The Start Single dialog, with the email notification checkbox at the bottom.

GOOD TO KNOW

- Score-based and Timed games can both be started as a Single session — a Timed single session is still played live, one player at a time, via the host screen described later in this guide.

Starting a Team Session

The **Start Teams** button opens a drag-and-drop board: members start in an "Unassigned" pool on the left and are dragged into two or more team columns. Every team receives a single shared access code — whichever device enters that code first becomes the team's screen for the rest of the round.

In this example, "Team Jedi" and "Team Sith" were set up from members drawn from the same pool as any other quiz.

Two teams assigned from the member pool, ready to start.

GOOD TO KNOW

- At least two teams, each with at least one member, are required before the Start Team Session button will submit.

Managing Single Sessions

Every session started from Quiz Games appears under **Live Quiz → Single Sessions**. From here an administrator can re-send an invitation, open the results for a submitted player, or archive a finished session to keep the list tidy.

The Single Sessions list.

The live leaderboard for a Score-based session.

Managing Team Sessions

The **Team Setups** tab lists every team round. Opening a setup shows each team's name, roster, and access code — useful for re-printing a code a captain has lost, or checking who was assigned to which team after the fact.

The Team Setups list.

Team detail — roster and access code for each team.

The Host Lobby

For a Timed game, **Launch** opens the host screen — intended to be projected or shared on a shared display. It starts on a lobby that lists every player or team and turns their chip green as they join with their code.

Nothing happens until the host presses **START** — there is no rush, and the round only begins once everyone (or as many as are expected) has joined.

The host lobby immediately after launching, before anyone has joined.

Chainsaw Operation - 2026-09-16

2 of 2 joined — 6 questions

Go to <http://localhost:3098/quiz> and enter your code:

Team Jedi

Team Sith

START

The same lobby once both teams have entered their code.

Running a Question

Once started, the host screen shows the current question, its four colour-coded options, a countdown bar, and a live count of how many players or teams have answered so far — so the host always knows whether to wait a little longer.

In this example, one team answered **"Both cold and warm start on the ground"** and the other answered **"Cold start on the ground, warm start between the legs"** (the correct option).

A question in progress, with the answered-count updating live as teams respond.

Reveal and Leaderboard

When the timer runs out — or the host reveals early — every incorrect option greys out and the correct one stays highlighted. The host then advances to a leaderboard ranked by total score so far, and from there either continues to the next question or, on the final question, finishes the round.

Chainsaw Operation - 2026-09-16

Question 1 of 6

What is the correct approved location for a cold start versus a warm (hot) start on a chainsaw?

1. Cold start on the ground, warm start between the legs

2. Cold start between the legs, warm start on the ground

3. Both cold and warm start on the ground

4. Both cold and warm start between the legs

Show Leaderboard →

The reveal screen — the correct option stays coloured, the rest grey out.

Chainsaw Operation - 2026-09-16

Question 1 of 6

1. Team Sith 69CH5Q955

2. Team Jedi RWGK7F0

Next Question

The leaderboard between questions, with a "Next Question" button.

Chainsaw Operation - 2026-09-16

Question 6 of 6

1.	Team Sith	69CH5Q	955
2.	Team Jedi	RW6K7F	0

Finish Quiz

The leaderboard after the final question — the button now reads "Finish Quiz".

Chainsaw Operation - 2026-09-16

Question 6 of 6

Quiz Finished!

1.	Team Sith	69CH5Q	955
2.	Team Jedi	RW6K7F	0

The final screen once the round is finished.

GOOD TO KNOW

- If the host's browser tab is closed or loses connection, every joined player sees a "Host disconnected" banner until the host screen is reopened — nothing is lost, and the round resumes exactly where it left off.

The Quiz Performance Report

The **Quiz Performance** report, found under Reports, summarises every quiz game played over a configurable lookback period — average score, completion rate, and how each question performed across all participants — useful for spotting a question that is confusing everyone rather than testing the intended skill.

OpReady Quiz Games Guide

26 / 40

PART 2

Player & Team Guide

What a member sees on their own phone when they join a quiz, whether playing solo or as part of a team.

JOINING

Joining With a Code

A player reaches a quiz one of two ways: by tapping a personal link sent by email, or by going to **/quiz** on their phone and typing in the code they were given. A team round works the same way — whoever on the team enters the code first becomes that team's screen for the round.

The join screen, ready for a code.

Waiting in the Lobby

After entering a valid code for a Timed round, a player or team lands on a waiting screen until the host presses START — there is nothing to do here but wait.

Waiting for the host to start the round.

If the Host Disconnects

If the host's screen closes or loses its connection — even briefly, between questions — every joined player sees a clear banner explaining the host has disconnected. This clears automatically the moment the host screen reconnects; no one needs to rejoin.

The host-disconnected banner, shown while waiting for the host to reconnect.

Answering a Question

Once the host starts the round, every player sees the same question and four colour-coded options at once, with a shrinking bar showing how much time is left. Tapping an option locks it in immediately — there is no changing an answer once submitted, so it pays to be sure.

A question in progress, with the countdown bar above it.

Seeing the Reveal

When the host reveals the answer, a player who answered correctly sees a tick on their chosen option. A player who answered incorrectly instead sees a cross on the option they picked, while the correct option is still shown highlighted alongside it — so it is always clear both what was chosen and what the right answer was.

The reveal screen for a team that answered incorrectly — a cross marks their pick.

The reveal screen for a team that answered correctly — a tick marks their pick.

Between Questions and at the End

Between questions, the same progress bar that showed the countdown switches to show overall progress through the round (for example, one question down out of six is shown as roughly 16%), alongside a leaderboard of every player or team's running score. At the end of the last question, this becomes the final leaderboard.

The leaderboard and progress bar shown between questions.

The final leaderboard once the round is finished.

Playing a Score-Based Quiz

A Score-based quiz looks and behaves like any other online form: every question is shown at once, there is no clock, and the player submits when they are done. The result — a final score out of the maximum possible — is shown immediately after submitting.

Working at Height - 2026-09-16

Score-based quiz covering fall-arrest classifications, edge protection distances, anchor point ratings and the hierarchy of fall-protection controls.

PLAYING AS
FF Kenobi, O

Under the 'limited free fall' fall-arrest classification, what is the maximum free-fall distance permitted?

* Required

☐ 300 mm

☐ 600 mm

☐ 1 m

☐ 2 m

Fall protection or edge protection must be provided when an employee is required to work closer than what distance to the edge of a roof (or any point from which a fall is possible)?

* Required

☐ 1 m

☐ 1.5 m

☐ 2 m

☐ 3 m

In the hierarchy of fall-protection options, which control is the MOST preferred?

* Required

☐ Fall restraint

☐ Restrained-fall arrest

☐ Exclusion area

☐ Safe systems of work

What minimum ultimate strength rating must an anchorage (or equivalent horizontal lifeline/rail) have for a full free-fall fall-arrest system limiting free fall to 2 m max?

* Required

☐ 5 kN

☐ 10 kN

☐ 15 kN

☐ 21 kN

True or False: if there is a possibility of the load of two persons being applied to a single anchor point, that anchor point should be able to withstand 21 kN.

* Required

☐ Yes

☐ No

In the hierarchy of risk controls (Elimination, Minimisation, Substitution, Isolation, Engineering controls, Administrative controls, PPE), which is considered the MOST effective?

* Required

☐ Elimination

☐ Administrative controls

☐ Personal protective equipment (PPE)

☐ Isolation

What is the term for an assembly comprising a harness connected to an anchorage point (directly, or via a lanyard or pole strap) whose purpose is to arrest a fall?

* Required

☐ Fall-arrest system

☐ Work-positioning device

☐ Fall restraint

☐ Rescue system

Which of the following are valid ways to ELIMINATE the need to access a fall-risk area? (Select all that apply)

* Required

☐ Relocate items requiring inspection or maintenance elsewhere

☐ Provide an alternative means of access, e.g. a walkway

☐ Wear a harness without any training

☐ Work faster to reduce time exposed to the risk

Submit Answers
